The Green Grid Members Spotlight

Company Name

Company Overview

Established in 1996, Mandragore has always been a beacon of efficiency and innovation through the use of technology and effective management practices. Mandragore has always promoted *green* practices, inherently, in its efficient solutions which boast solid corporate citizenship and responsibility. Our new and innovative offering, **UFlexData**, promises to save an estimated 85% or better in data center power consumption versus traditional systems and computing models.

Our goal is to make our clients more profitable, by providing them with more efficient methods of conducting business through proven leading edge technology and creative management techniques. We are results oriented, basing our principles on logic. At Mandragore, everything we advise our clients on is meant to reduce waste and make their business run at peak efficiency, from personnel to systems and power consumption.

Current Focus

Our firm will launch **UFlexData** this year, targeting small to medium-sized (SMB) companies which maintain anything from data closets to small data centers, or that don't have a managed technology solution. Our objective is to consolidate SMB computing onto our **UFlexGrid**, a global computing platform, through which we deliver our **UFlexData** solution. Our expectation is that in doing so, **we will reduce SMB computing energy consumption by more than 85%**.

Complementing our offering to the SMB markets will be consultancy to larger firms on our model and establishing a **UFlexGrid** certification, which would guarantee a firm has met certain criteria in their infrastructure design, demonstrating a reduction in their carbon footprint. Those subscribing to a **UFlexData** solution would be afforded this certification by default.

How is your company engaged with The Green Grid?

As a general member, Mandragore hopes to make contributions in the overall objectives of The Green Grid and share its intellectual property, where economically feasible, towards the innovation of computing efficiency with other members of The Green Grid and Mandragore partners. As global ambassadors of efficiency, we strive to raise awareness in our computing model and its benefits.

What activities is your company involved in which promote energy efficiency in the data center?

Our **UFlexData** solution coupled with our **UFlexGrid** will offer companies a turnkey, hosted, fully-managed, and secure infrastructure from which to conduct their business. The combined solution will produce energy savings within the data center through resource pooling, and at the desktop through low-energy consuming devices, better known as the UFlexData Business Computer.
